

A technician in a blue uniform is working on a SwissNano machine. The machine is a precision Swiss turned part manufacturing system. The technician is focused on the work, with his hands near the machine's tool head. The machine has a white box with the 'SwissNano' logo and a yellow warning triangle. The background is dark and industrial.

# PRECISION SWISS TURNED PARTS

A Profession Born From Love...

## About Us...

Situated at the very heart of Bernese Jura, a region that is world famous as the birthplace of Swiss watchmaking and precision turned parts, Roger Maeder SA was founded in 1978. The company was able to take advantage of the vast pool of expertise in the region by surrounding itself with local partners from all the different branches of micro-technology.

The result of this was that, in addition to high-precision capabilities, Roger Maeder SA had two further strings to its bow – flexibility and an ability to respond to new and changing demands – two factors that are highly valued by its clients. This means that its machinery is constantly being customised and adapted to the requirements of its clients.

The company relishes a challenge... its technical mastery of cam-controlled turning machines makes it competitive, whilst at the same time, the acquisition of new CNC turning machines makes it more flexible and enables it to produce more complex parts.

The success of the company can be attributed not only to the proximity and trust it has placed in its suppliers for so many years, but also to the versatility, passion, skills and expertise possessed by its team of employees.

## Our Activity...

Precision Swiss turned parts, predominantly for large production runs of semi-complex parts with a high added value

## Our Speciality...

- polygonal turning
- long drilling (brass)
- micro-turning

## Our Machinery...

- 100% Swiss made
- 32 upgraded and personalised Tornos cam-controlled turning machines
- 2 numerically controlled (CNC) turning machines

1:1

## Your Products... Our Expertise!

Diameters from 0.08 mm to 10.00 mm

Materials machined:

- copper alloys (brass, CuBe, nickel silver)
- mild steels
- hardenable, free-cutting carbon steels (Sandvik 20AP)
- stainless steels
- aluminium
- bronze

## Your Industry... Our Domain!

- micro-connector technology
- test plungers, pogo pins
- watchmaking
- components and ancillary equipment
- automotive

## Your Standards... Our Quality!

ISO 9001 certification

1:1
